

AUTOMATIC SCHEDULING

With Nuclear In-Processing Xpress (NIX) the scheduling of individuals' training and badging activities is easily accomplished. A scheduling administrator in the application can set up buildings and rooms, as well as, set up activities to be held in those rooms. As individuals arrive on site for badging they can be automatically or manually enrolled in activities required for badging and training.

FULL PADS INTEGRATION

The activities required are determined by checking the Personnel Access Data System (PADS) to determine the individual's previous badging activities and training activities taking into account any expirations. A scheduling grid is available, as well as, views that show individuals schedules, class rosters, and room schedules. NIX also provides the capabilities to interface with external activity tracking tools.
